FIG. 1 · WF (WORKFLOW CORE)

WF installs the workflow into the moments of work

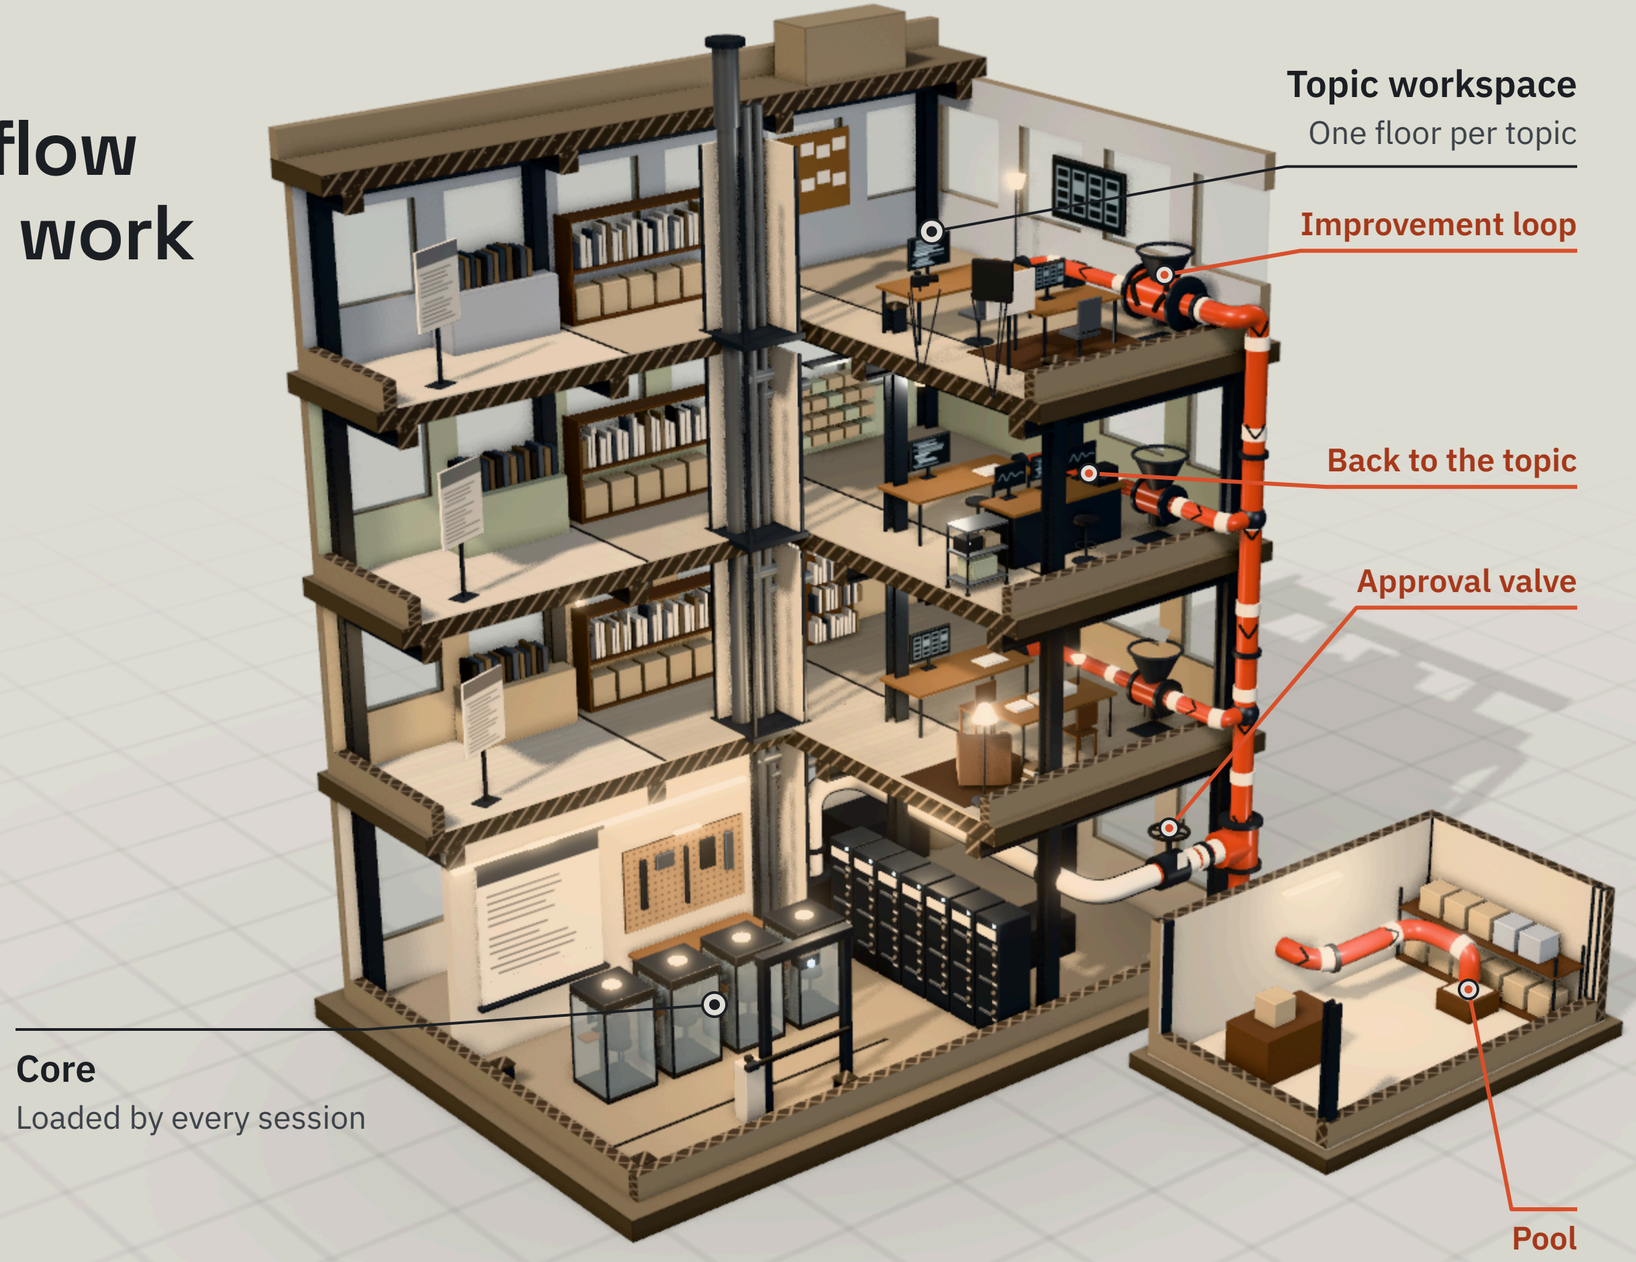

FIG. 2

Rules kept only as documents are absent when work happens

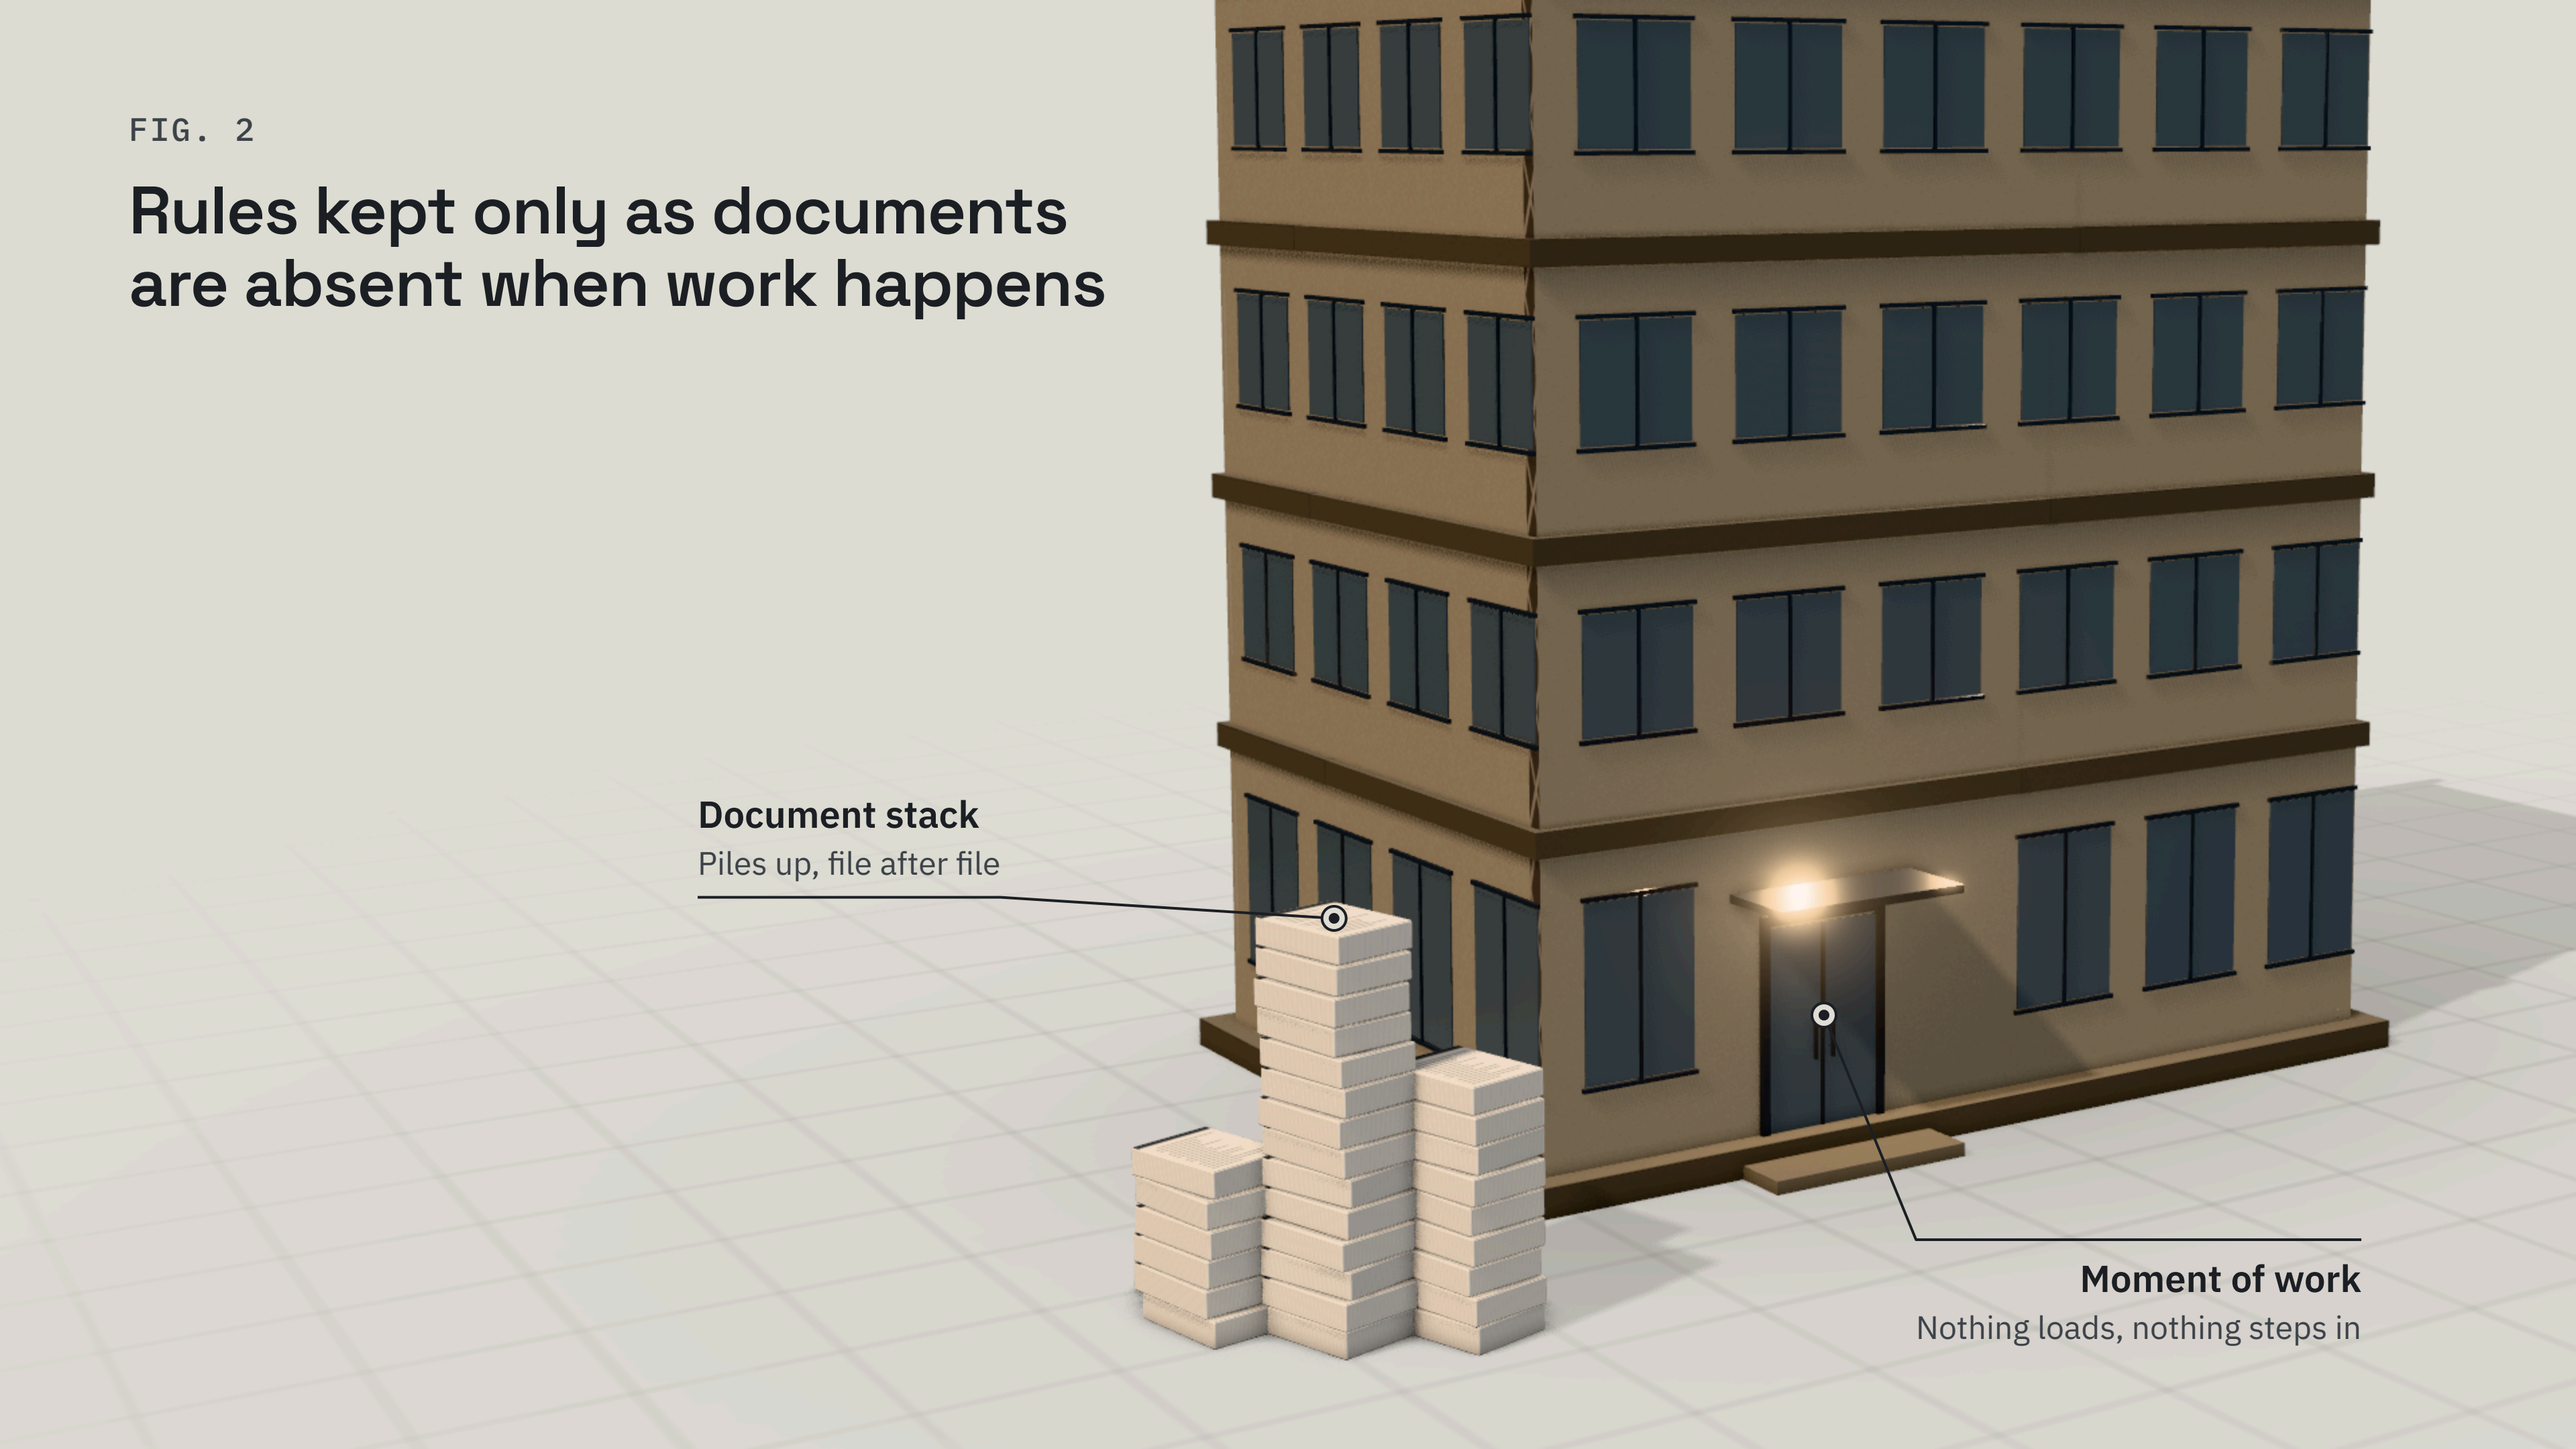

FIG. 3

The layers are cut by what loads into a session

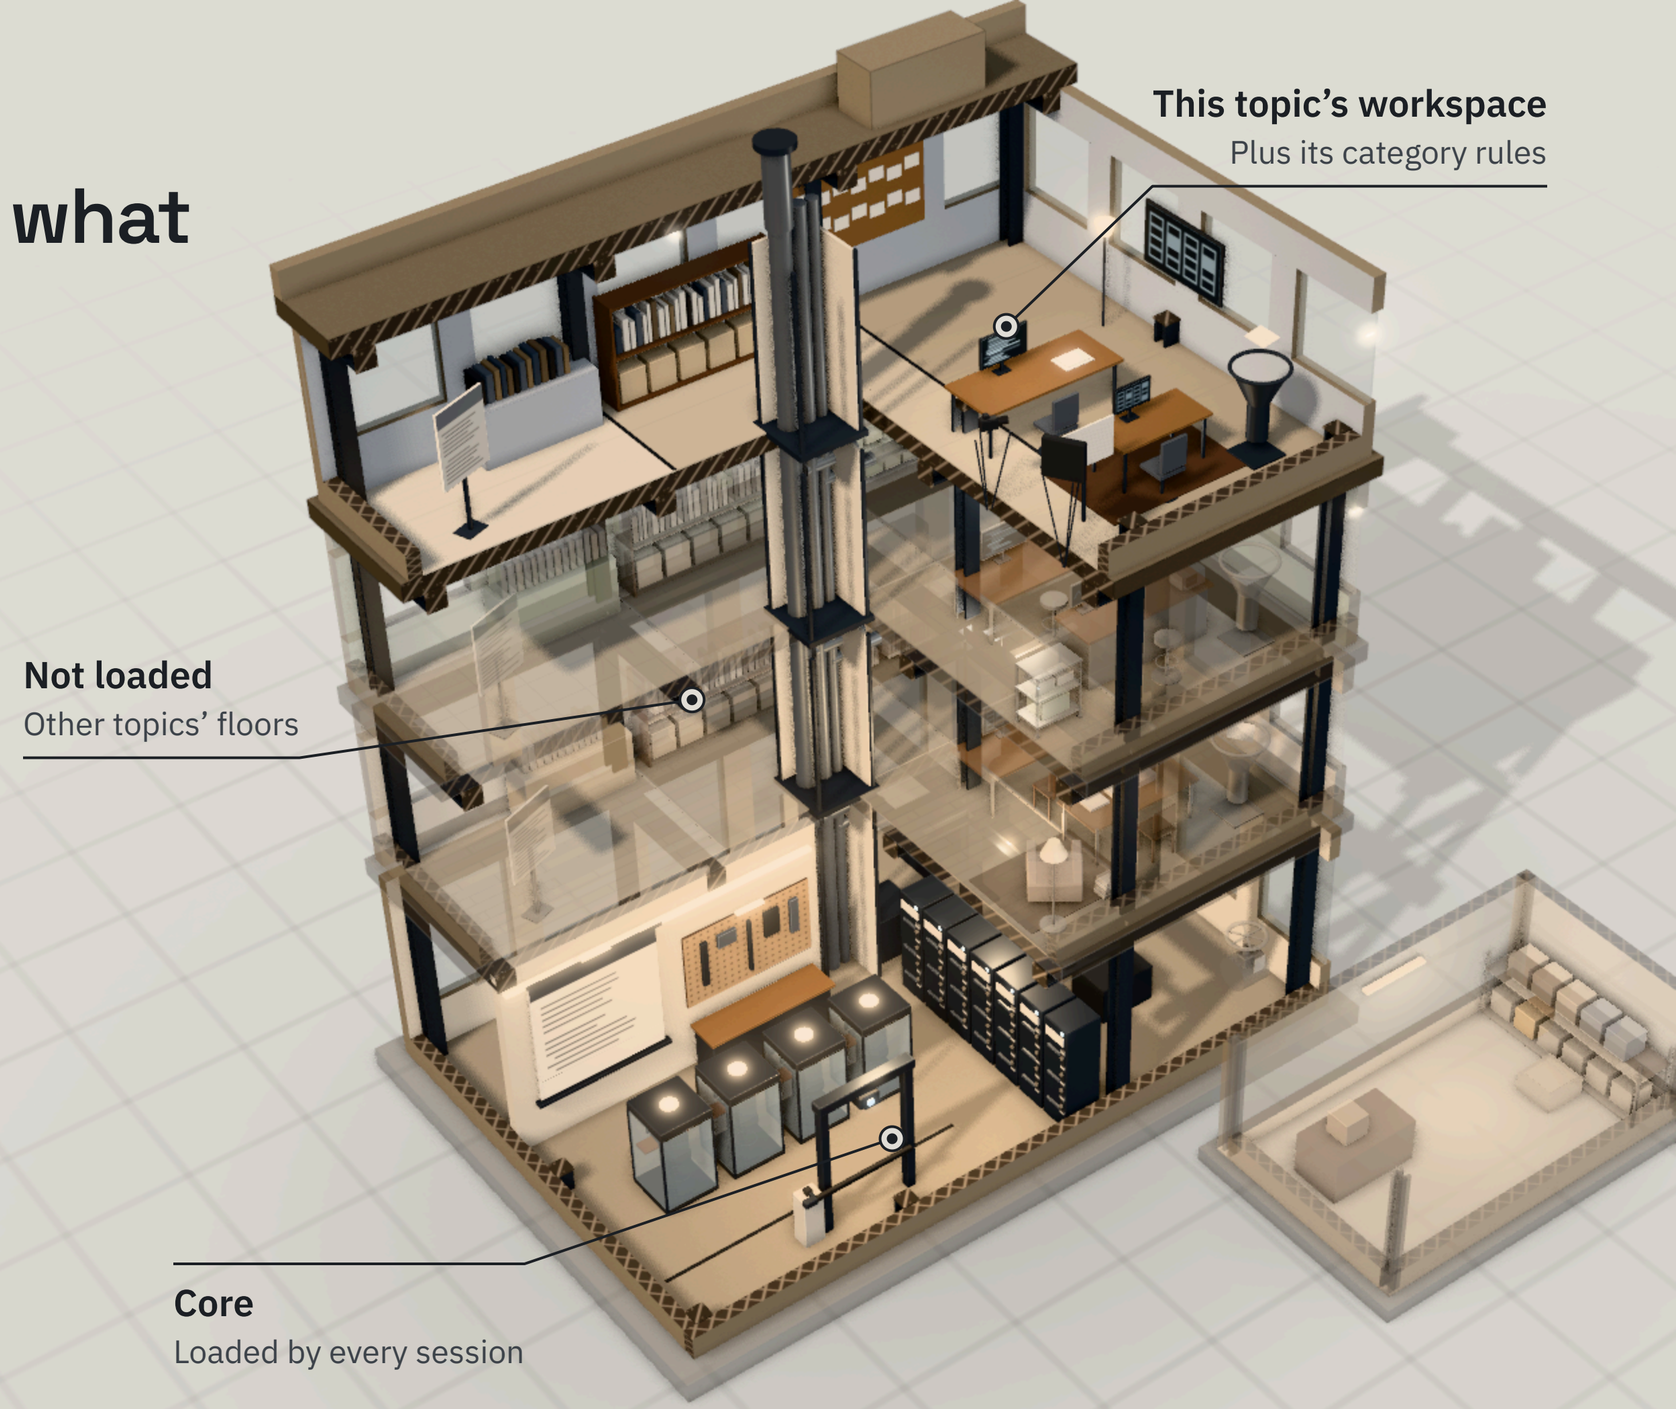

FIG. 4

Every session loads the same five-piece core

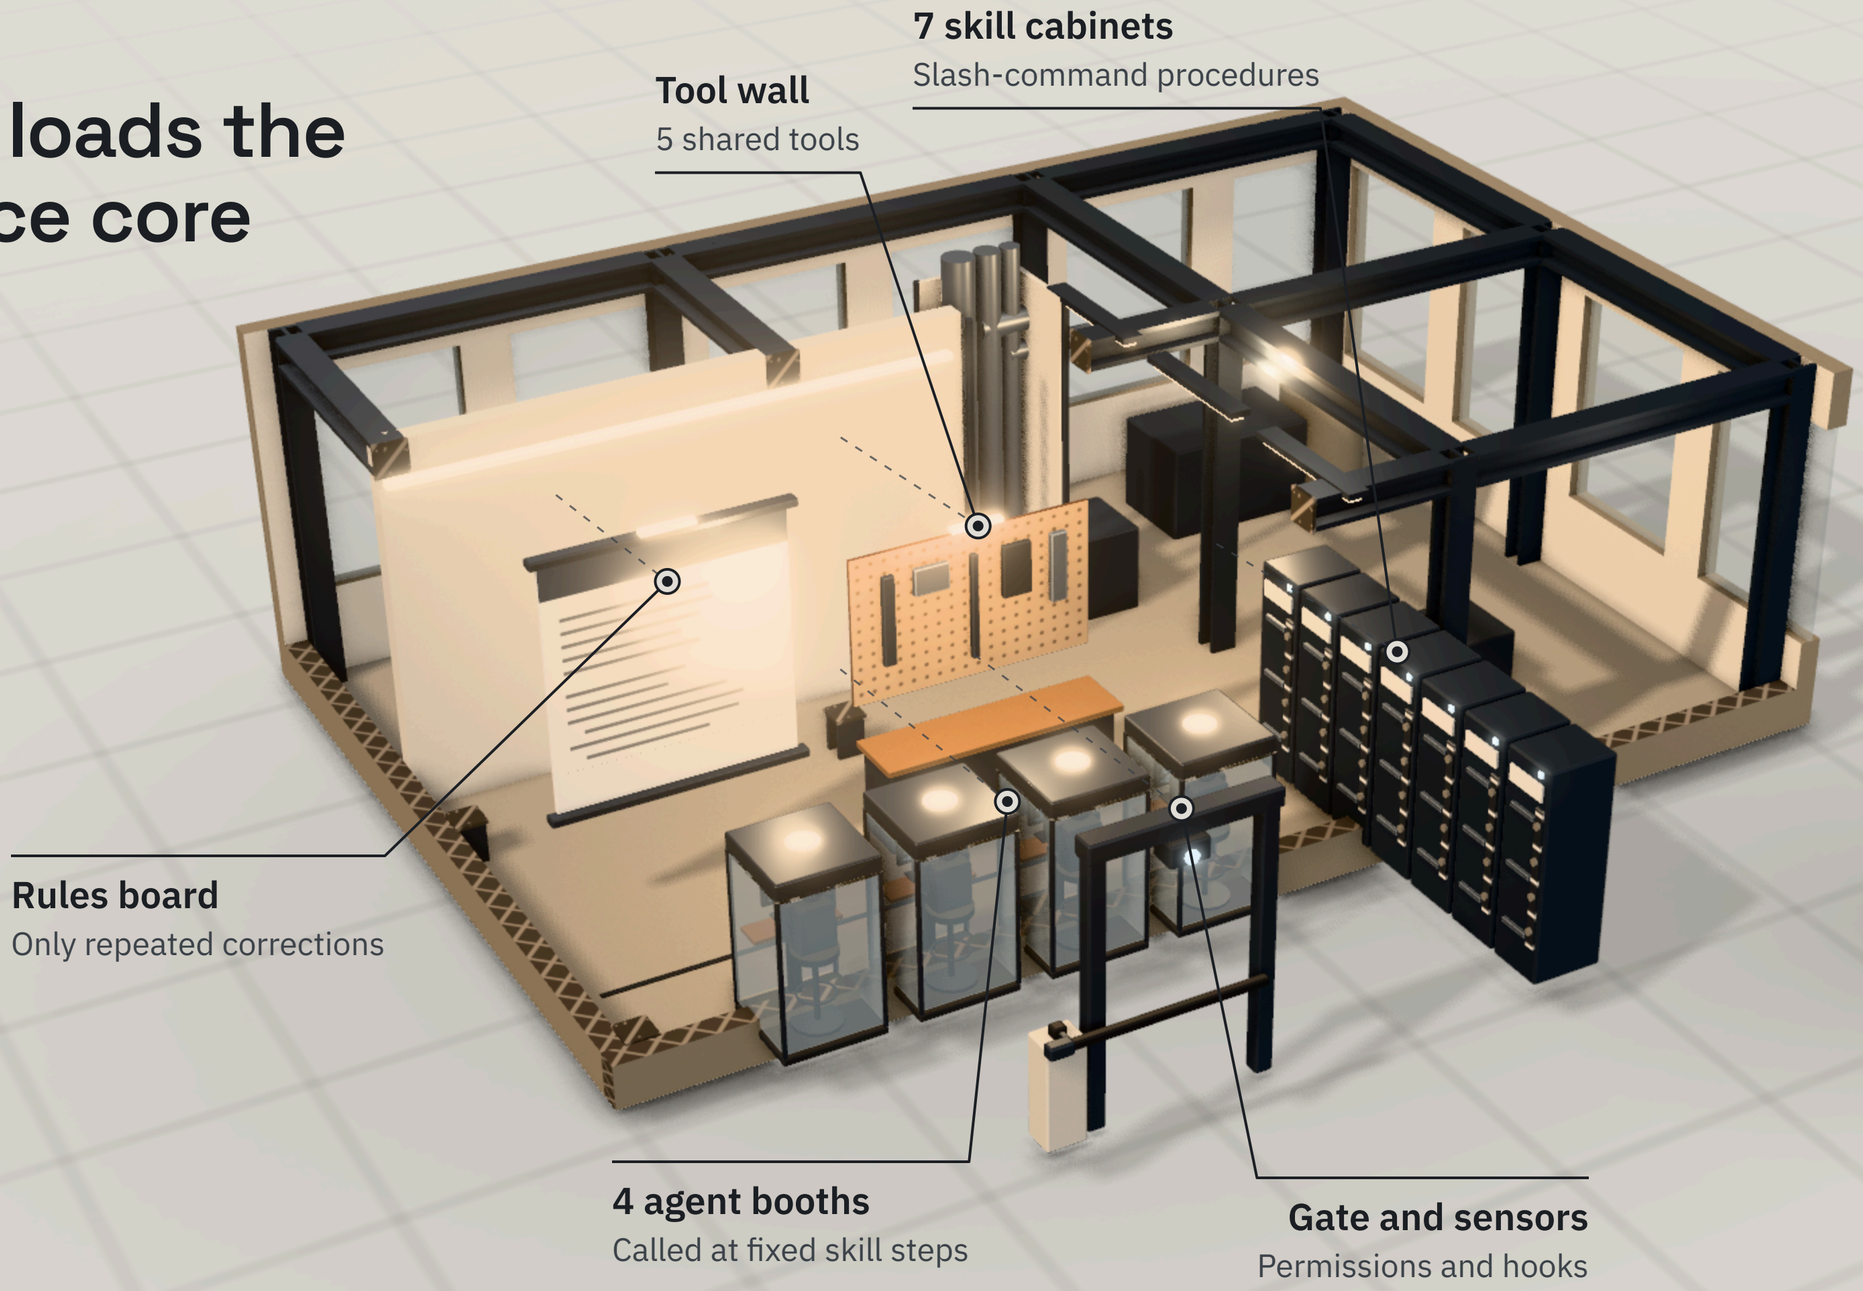

FIG. 5

Each of nine moments has a fixed piece that steps in

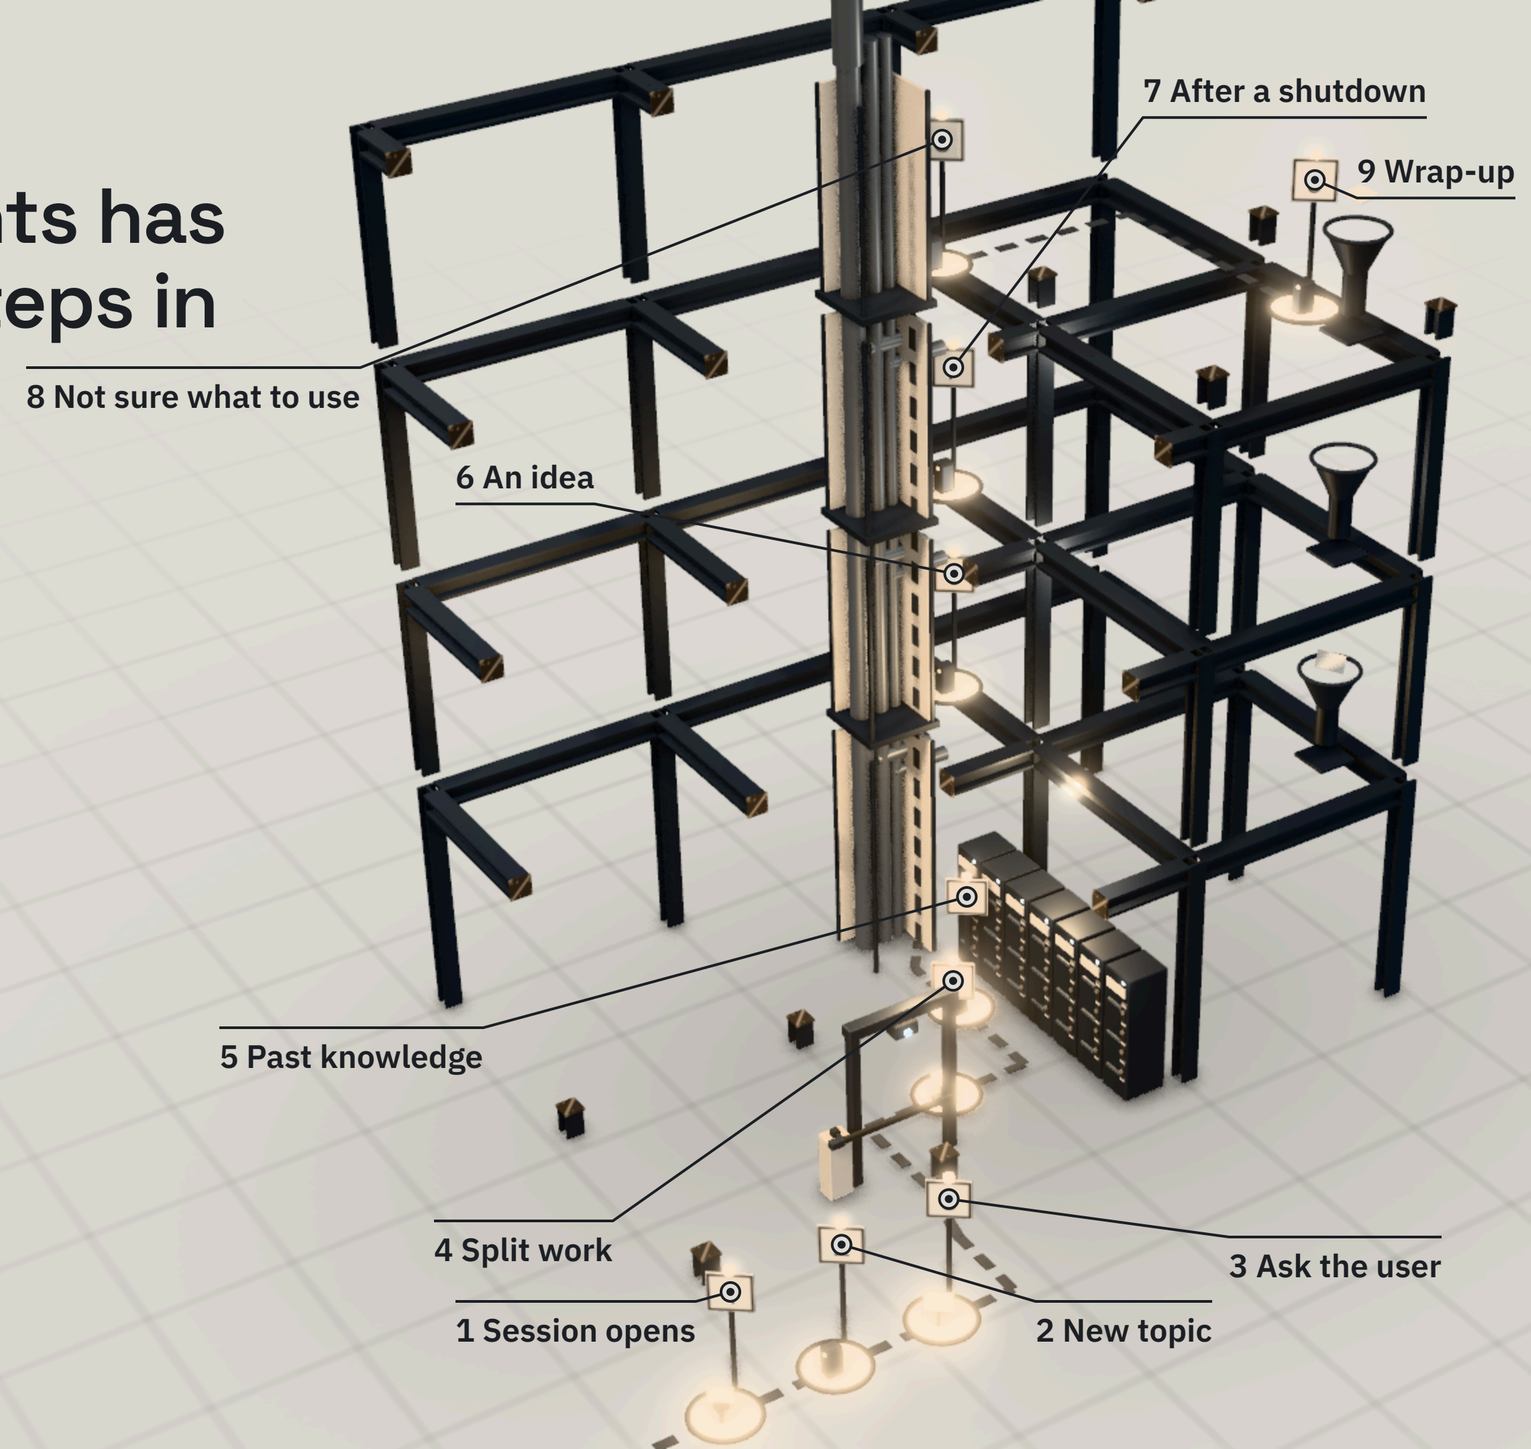

FIG. 6

Agents step in only at fixed steps of a skill

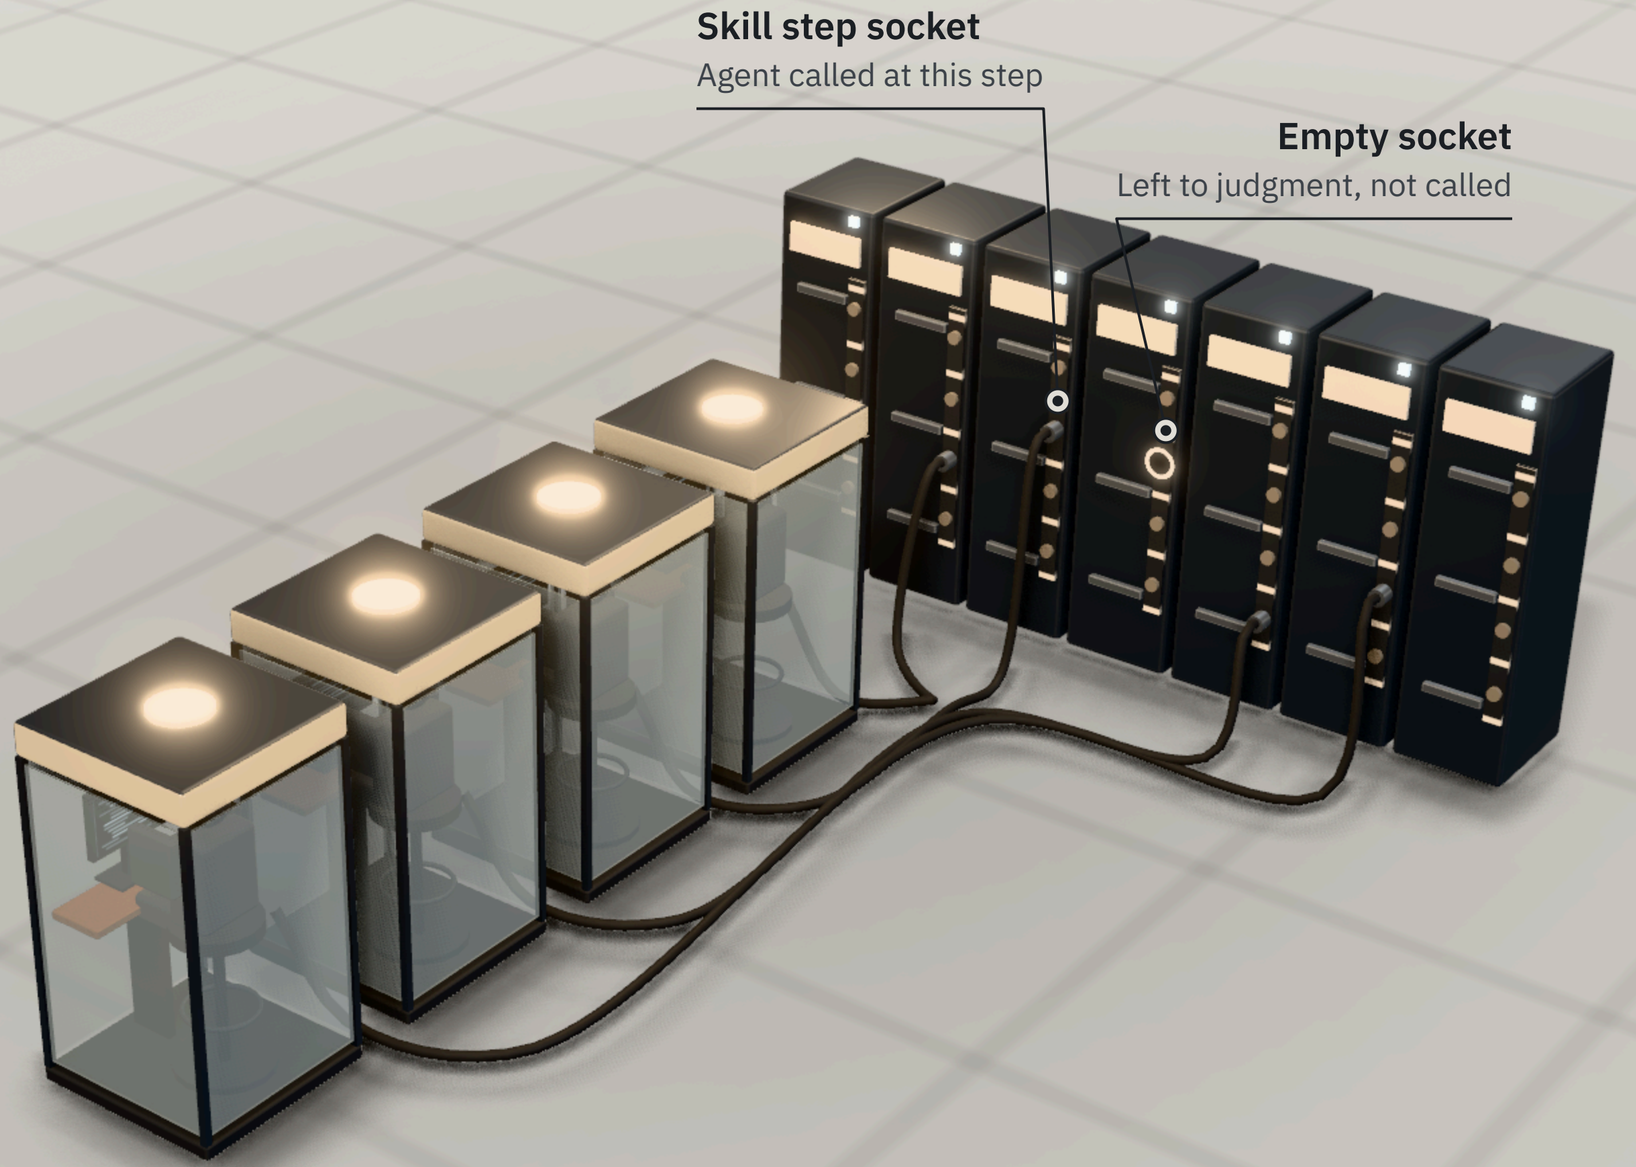

FIG. 7

Each topic’s own workspace stands on the core

Re-entry card
Purpose first, overwritten

Decision log
Superseded, never deleted

Knowledge shelves
Sources, then interpretation

Core
Loaded by every session

FIG. 8

Knowledge lives at the narrowest layer where it repeated

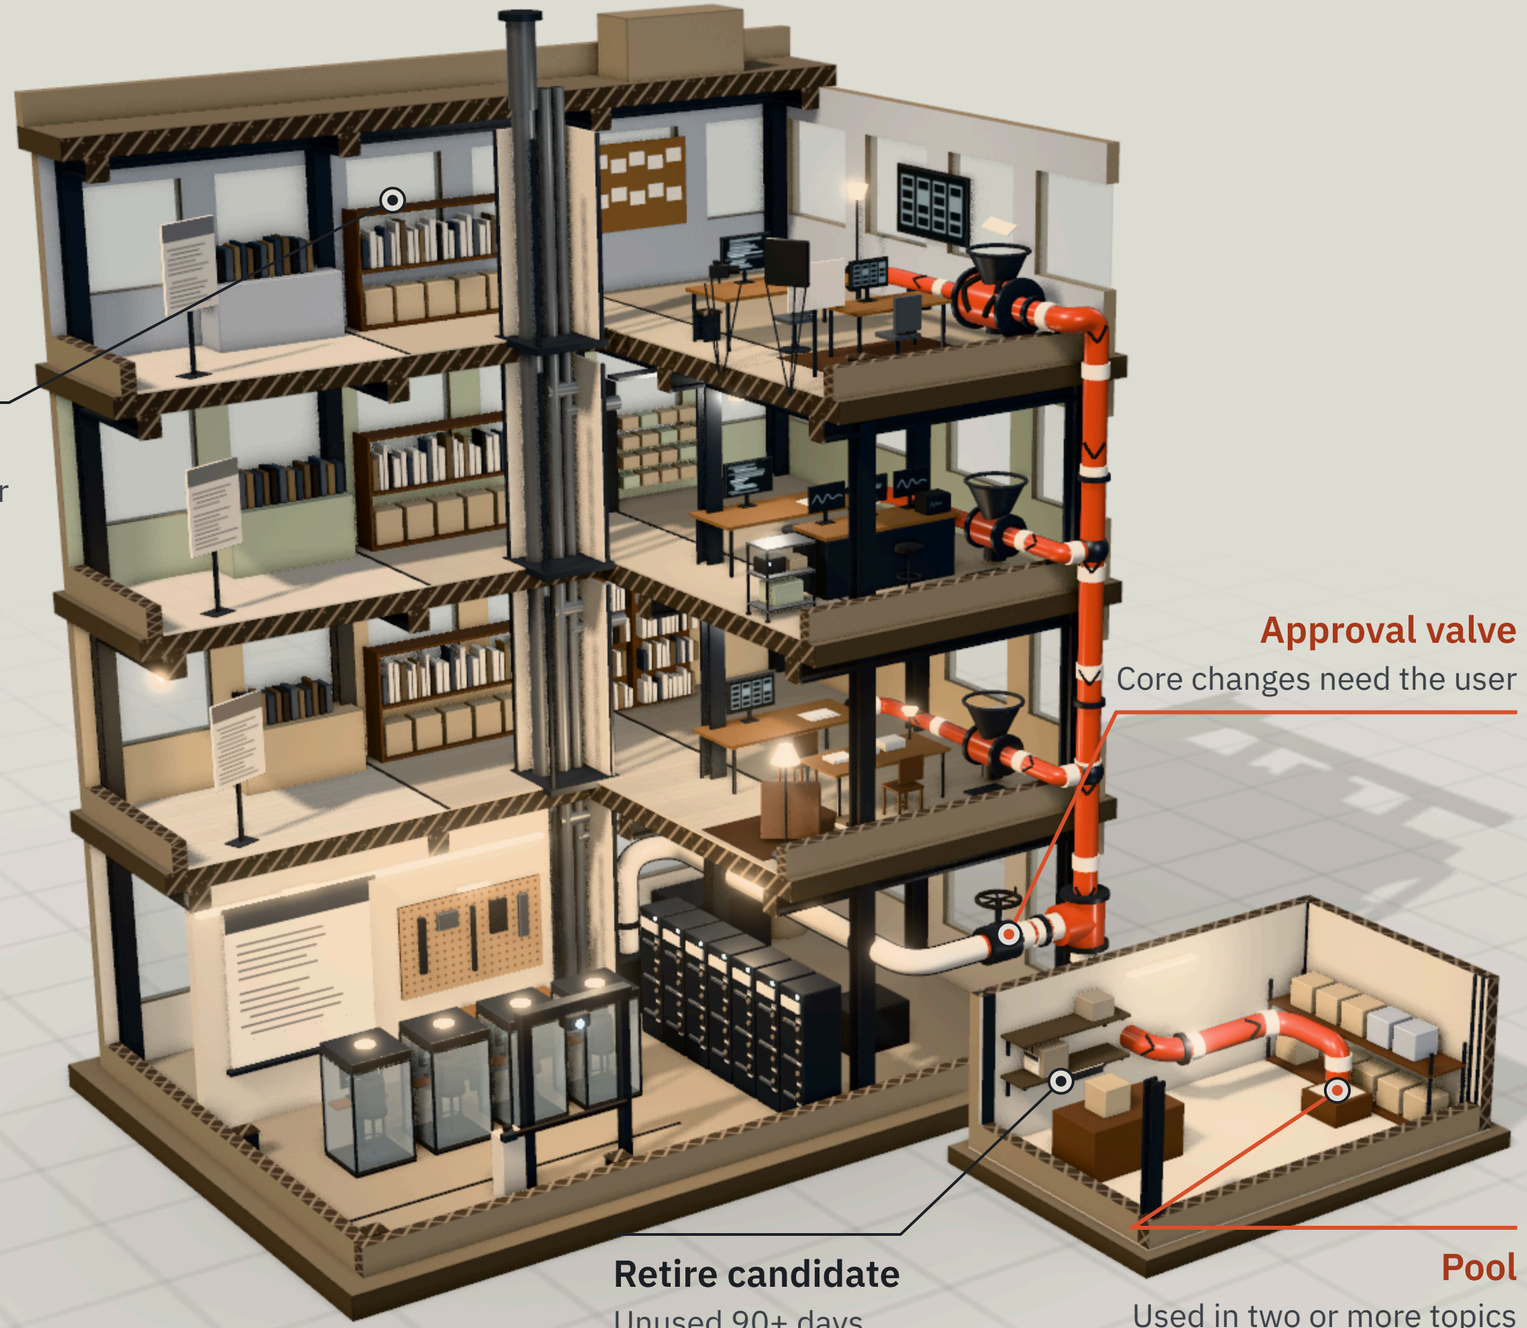

FIG. 9

Finished work flows back to its topic, the pool, or the core

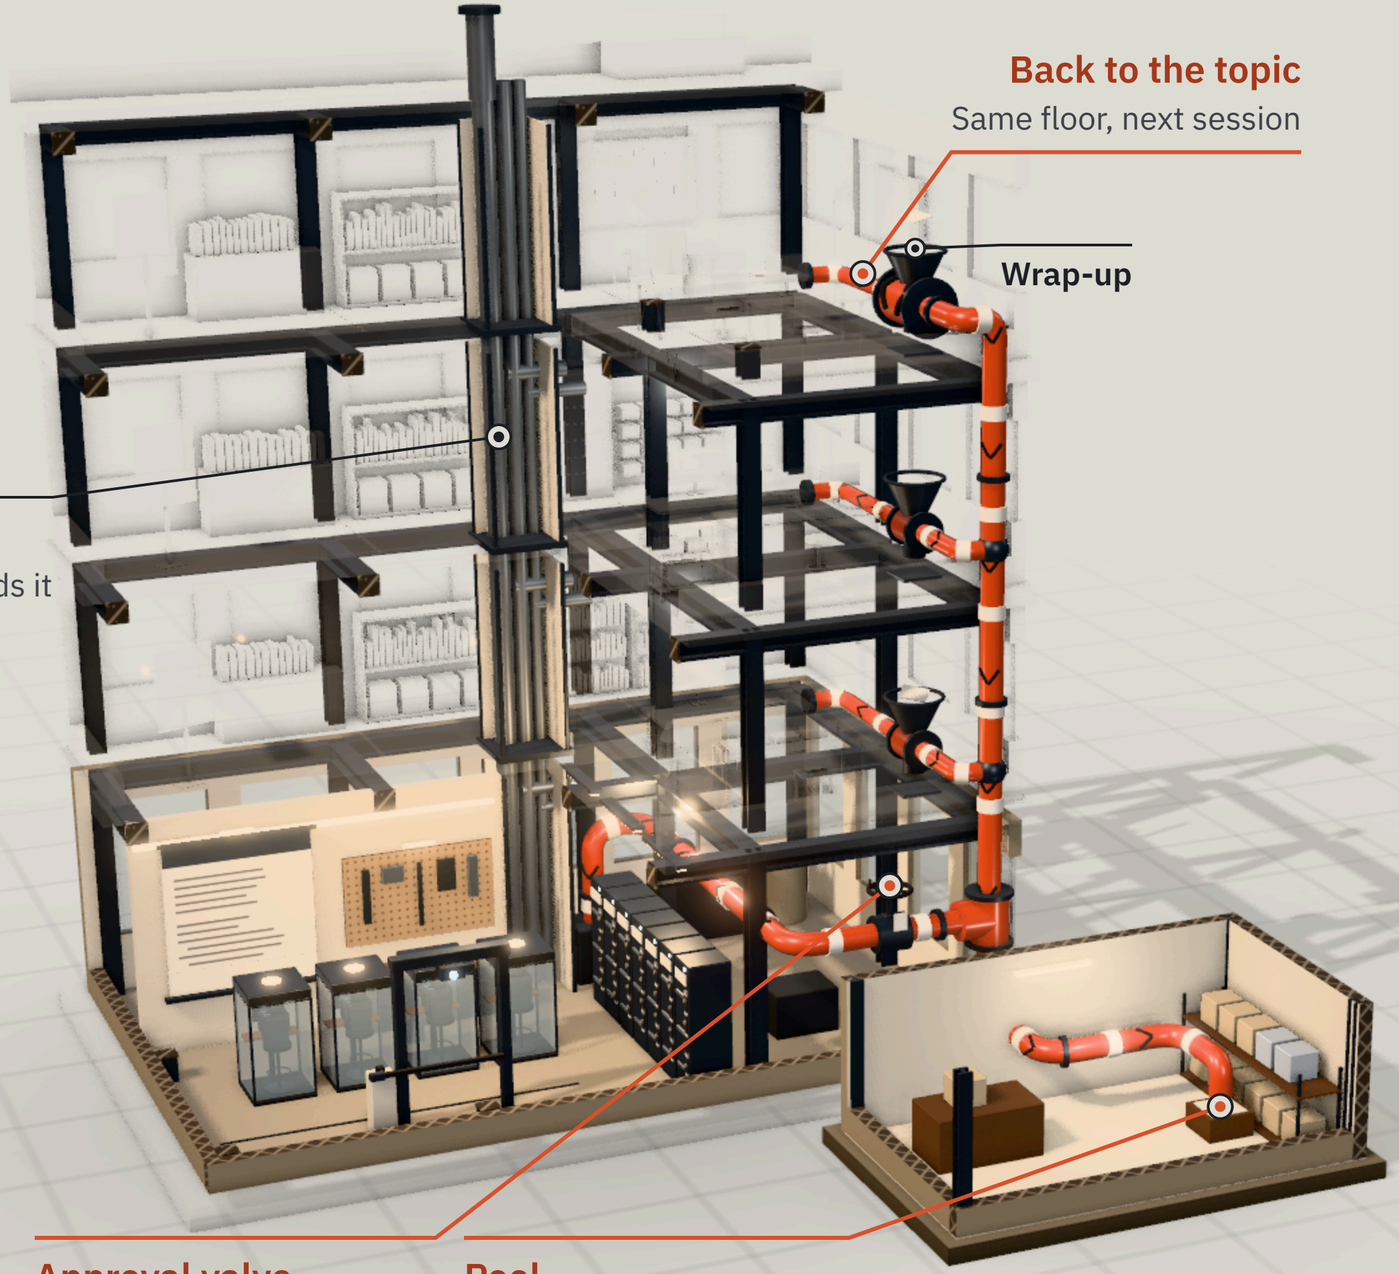

FIG. 10

The frame is edited at source, approved, then installed

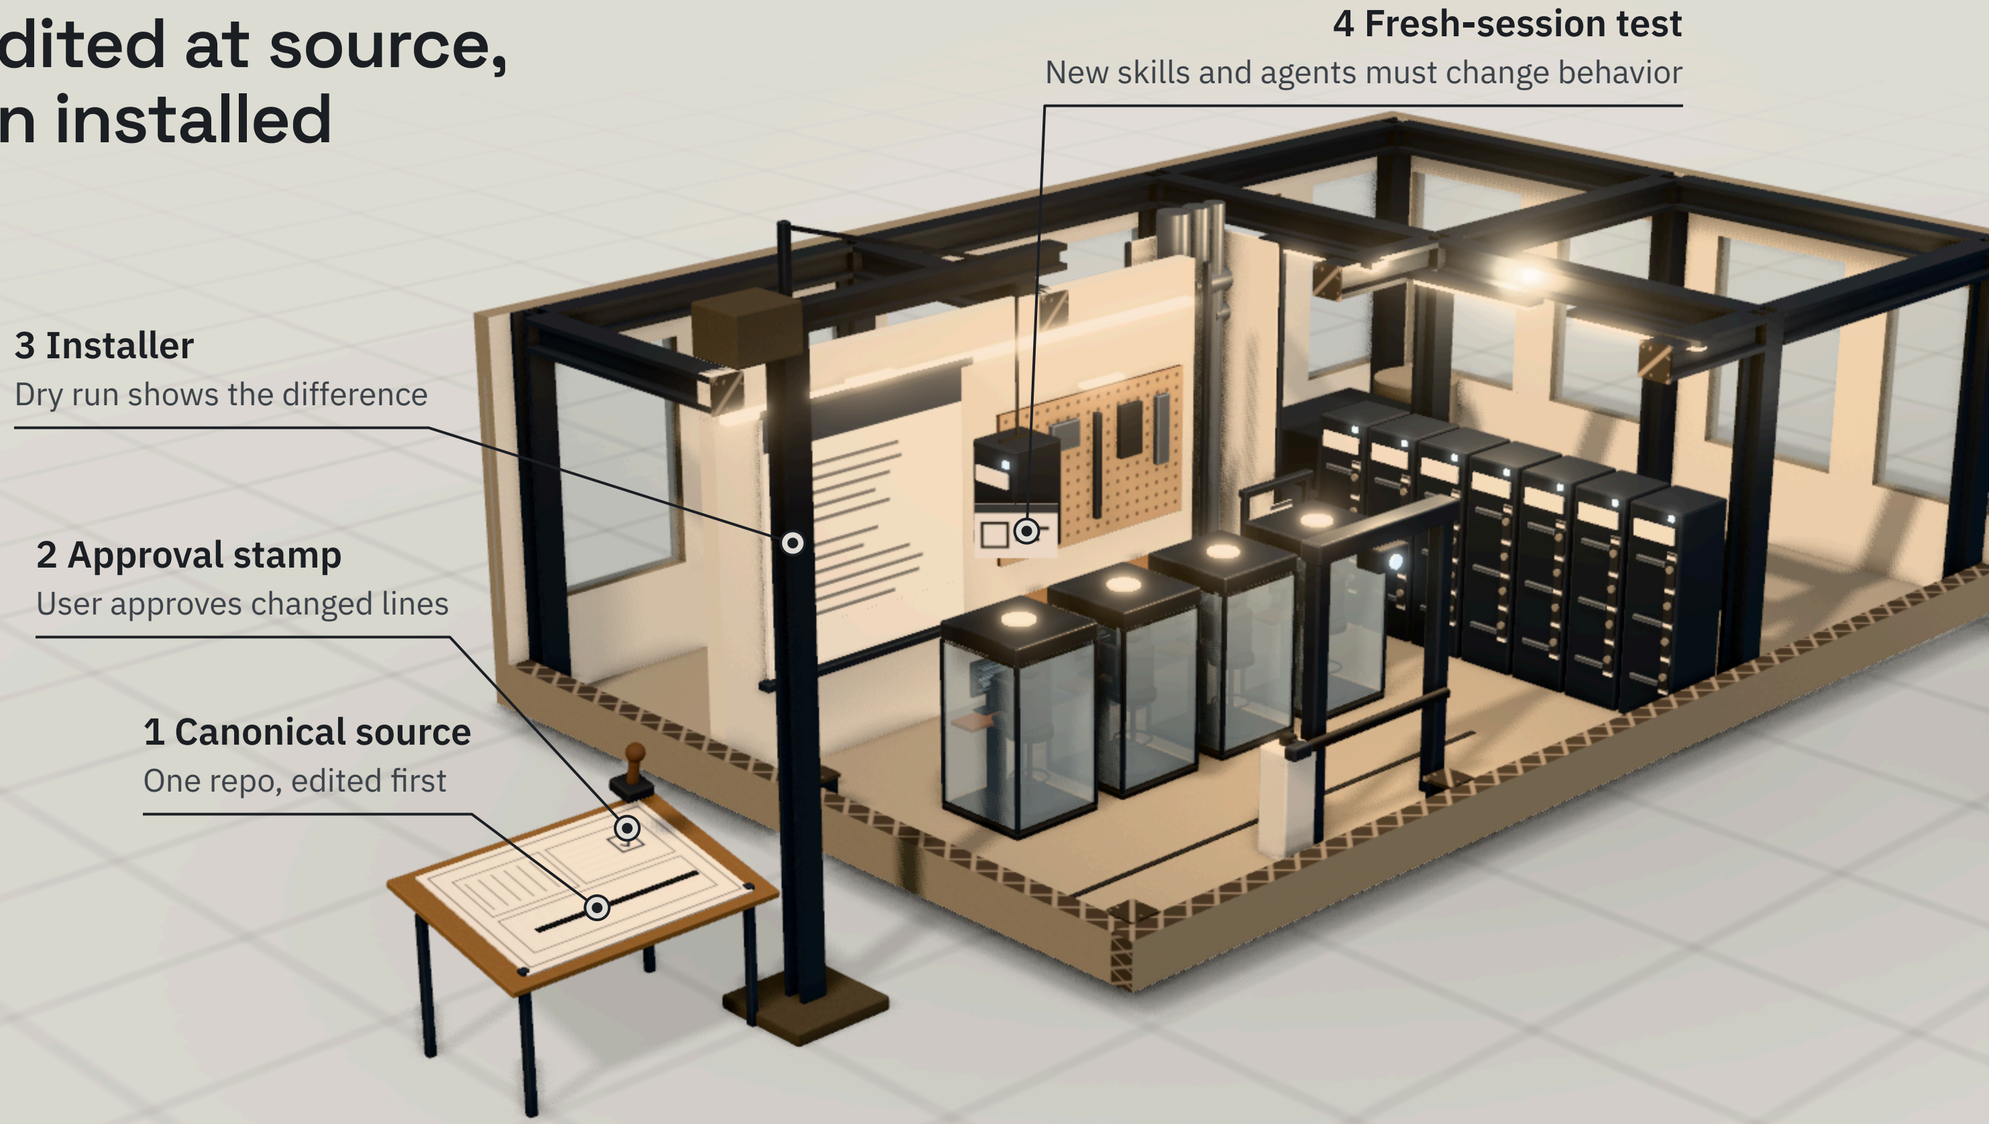

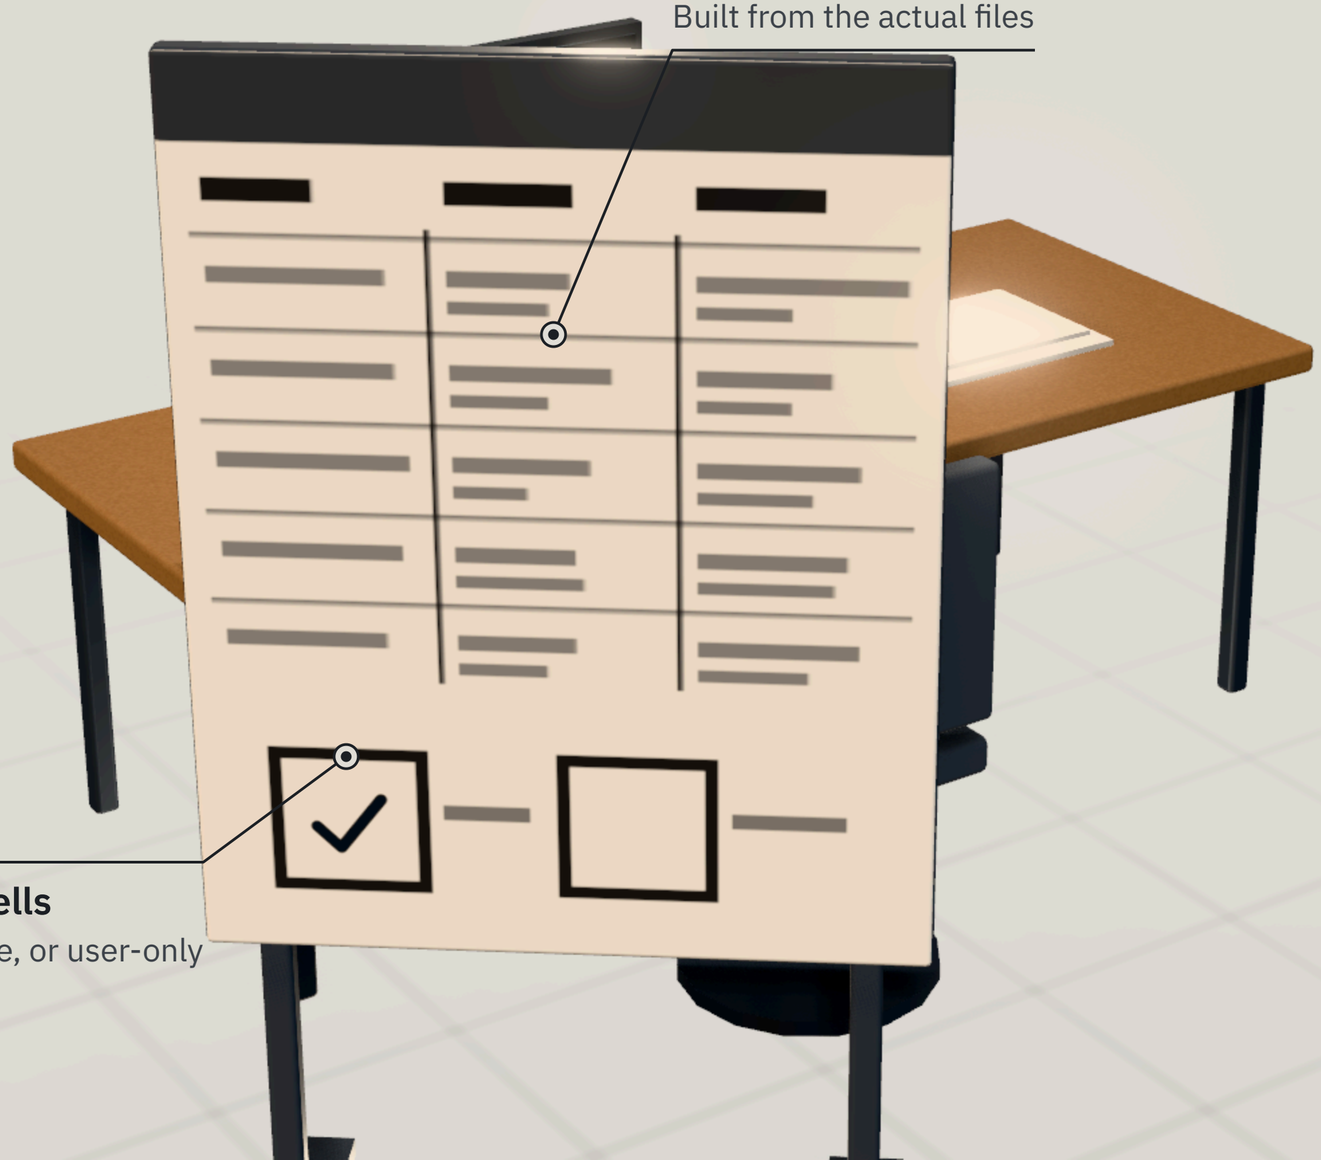

FIG. 11

The human marks two cells at most, on a page of real files

Public text is the exception
Every paragraph is marked before it goes out.

FIG. 12

This frame changes only with the user's approval

One long CLAUDE.md?
It loads, but cannot close a gate.

Many agents?
Each is called at a fixed step.

Where the picture breaks
A real frame stays fixed

Not piloted yet. Next: the article and the 3D model.
